

## Modelling teams

Modelling teams were asked to give a short description of their methods, among other metadata.

Team	Methods
<b>ECDC</b> ECDC-CM_ONE	Discrete-time, deterministic, mean-field SEIR-type compartmental model on metapopulation level. Population divided by age, vaccination status, and previous recovery; incl. seasonality, BA2 & behavior.
<b>Dutch National Institute of Public Health and the Environment (RIVM)</b> RIVM-vacamole	Deterministic, age-structured SEIR model, accounting for differences in susceptibility/infectiousness by age, seasonality, contact patterns, modes of vaccine protection, and waning immunity.
<b>SIMID</b> SIMID-SCM	Stochastic age-structured discrete time extended compartmental model
<b>Universidad Carlos III de Madrid</b> UC3M-EpiGraph	Agent-based parallel simulator that models individual interactions extracted from social networks and demographical data.
<b>University of Southern California</b> USC-SIKJalpha	Uses SIKJalpha which models temporally varying infection, death, and hospitalization rates. Learning is performed by reducing the problem to multiple simple linear regression problems.
